~ LINUX V.S WINDOWS ~
(2020 EDITION)

Linux Mint 19.3 Tricia Cinnamon · Windows 10 2004 Insider preview (OS build: 19541.1000)

Date created: 1/16/2020

Linux is a free and open sourced software. My personal favorite Linux system is Linux Mint Cinnamon. If you're switching from Windows to Linux, I recommend using Linux Mint Cinnamon. Because it's very easy to install and use. The Linux Mint Cinnamon interface is somewhat alike Windows, so it will be easy to learn it.

LINUX

Bloatware
Linux doesn't contain as much bloatware. The bloatware in Linux is at least removable.

Apps
Linux doesn't use .msi or .exe to install your apps. They use other formats.

Security
THE SECURITY IN LINUX IS THE BEST, IT DOESN'T HAVE ANY SECURITY FLAWS. WHICH IN THIS CASE, YOU REALLY DON'T NEED AN ANTI-VIRUS TO RUN LINUX.

THEMES
THE THEMES ON LINUX IS VERY NICE AND SIMPLE.

WINDOWS 10

Bloatware
Windows 10 is full of un-needed bloatware that shouldn't be there that isn't removable.

Apps
Windows only uses .msi and .exe to install your apps

Security
The security on Windows isn't the best. Back on 1/16/2020, the NSA (U.S government) has issued a security flaw inside of the Windows 10 system that can affect more than 900 million computers. Later on in the day, Microsoft did release a CVE security patch update to fix this, which is known as: 2020-01.

Theme
The theme on Windows 10 is very flat, very slow, and very boring.
